Professional Summary

Bachelor of Applied Science in Business Information Systems from State Polytechnic of Malang with professional experience as a Backend and Full-stack Developer in the education and manufacturing sectors. Experienced in handling the end-to-end system development lifecycle from relational database architecture design (MySQL) and centralized security implementation (SSO & dynamic RBAC) to enterprise-scale RESTful API integrations (SAP). Proven ability to thrive in Agile environments, focusing on writing clean, reusable code and comprehensive technical documentation to ensure long-term system scalability

Education

Politeknik Negeri Malang

- Degree: Bachelor of Applied Science in Business Information Systems
- GPA: 3.78 / 4.00

Skills

- **Programming Languages:** PHP, JavaScript, Dart, HTML, CSS.
- **Frameworks & Libraries:** Laravel (MVC), Flutter, Bootstrap.
- **Databases:** MySQL, Database Modeling (ERD & PDM).
- **Tools & Version Control:** Git/GitLab, RESTful API, Postman, SMTP, WhatsApp API.
- **System Design & UI/UX:** Figma, Flowchart & Activity Diagram (Draw.io).

Soft Skills:

- Complex Problem Solving
- Analytical Thinking
- Systematic Thinking
- Agile Team Collaboration
- Time & Task Management
- High Adaptability

Experience

UPA TIK Politeknik Negeri Malang

February 2025 - June 2025

Back-end Developer | PPID Polinema

- Designed relational database architecture and Physical Data Models (PDM) from scratch, encompassing multi-level access rights schemas, dynamic menus, user management, activity logging, and E-Form workflows.
- Developed the system's backend by implementing Single Sign-On (SSO) and dynamic Role-Based Access Control (RBAC) architecture for granular, multi-level access management.
- Implemented a centralized template for the Summernote Editor module with customized text formatting features, creating modular and reusable code for various content-input menus.
- Developed reusable starter code utilizing Laravel Traits at the Model and Controller levels to streamline core database operations, activity logging, session management, and pagination.
- Engineered dynamic E-Form workflows integrated with timeline tracking, submission verification, and automated result notifications via Email and WhatsApp.

Tech Stack & Tools: Laravel, PHP, MySQL, JavaScript, Git, Postman, MySQL Workbench, Summernote Editor, WhatsApp API (Foonte), SMTP, Bootstrap, VS Code.

Full Stack Developer | MSJ Bill Of Materials (BOM)

- Designed user interfaces (UI/UX) and formulated comprehensive system architecture blueprints, including Flowcharts, Activity Diagrams, and Entity Relationship Diagrams (ERD) for the Jumbo, Slitter, and Meltblown modules.
- Developed dynamic Bill of Materials (BOM) transaction features (Create, Update, Show, List) using Laravel and the company's internal framework (MSJ Framework), equipped with complex mathematical calculations (Comp QTY, Product QTY, Target Value) and automated error handling validation.
- Built an integrated Report Dashboard capable of generating visual data charts and exporting reports to Excel formats based on specific parameter filters (e.g., year).
- Integrated SAP APIs for real-time resource and material validation, featuring unregistered data alerts and autofill functionalities to ensure data consistency and prevent typographical errors.
- Authored detailed technical documentation and system manual books to facilitate smooth operations for end-users (PPIC Role).

Tech Stack & Tools: Laravel, MSJ Framework, PHP, JavaScript, MySQL, RESTful API, Figma, Draw.io, Git/GitLab, VS Code.

Academic Projects

1. Native Website Development: Customer Satisfaction Survey Information System

Full-Stack Developer & UI/UX Designer (May 2024)

- Designed the User Interface (UI) and User Experience (UX) for a web-based customer satisfaction survey system using Figma.
- Structured and mapped out the database schema using MySQL.
- Developed the frontend and backend architectures from scratch using HTML, CSS, PHP, JavaScript, and MySQL

1. Student Compensation Information System for the Department of Information Technology

Full-Stack & Mobile Developer (December 2024)

- Designed UI/UX layouts for both web-based and mobile compensation applications using Figma.
- Engineered the core database structure and schema utilizing MySQL.
- Developed the web-based information system to manage student compensation data using Laravel, MySQL, and REST APIs.
- Built a Flutter-based mobile application that seamlessly integrates with the web system's APIs.

Core Strengths

- Technological Adaptability: Fast learner with the capability to quickly adapt to new technologies, including modern frameworks like Laravel and Flutter (Dart).
- Collaborative Mindset: Experienced in working inside cross-functional teams to execute academic and professional projects efficiently.
