Professional Summary

A final-year Business Information Systems (Applied Bachelor) student at State Polytechnic of Malang with professional experience as a Full-Stack and Backend Developer through internship programs in educational institutions and manufacturing industries. Possesses deep expertise in the Laravel ecosystem, API development, and complex database management using MySQL. Adept at working collaboratively within Agile team environments. Highly committed to writing efficient code and compiling comprehensive technical documentation to support long-term system scalability and maintainability.

Education

State Polytechnic of Malang (Ongoing)

- Applied Bachelor (D-IV) in Business Information Systems
- Current GPA: 3.76 / 4.00

Skills & Tools

Programming:

- Web Frameworks: Laravel (MVC)
- Database: MySQL
- Programming & Native Web: HTML, CSS, PHP, JavaScript
- Mobile Frameworks: Flutter (Dart)

Soft Skills:

- Effective Team Communication
- Time Management
- Analytical Thinking
- Problem Solving
- Agile Team Collaboration

Experience

UPA TIK Politeknik Negeri Malang

February 2025 – June 2025

Back-end Developer

- Designed the Physical Database Model (PDM) using MySQL Workbench for Information Systems, User Access Management, and Log Tables.
- Successfully implemented system database structures and schemas using MySQL.
- Created modular JavaScript templates for Summernote Editor integration, including secure image upload and deletion features.
- Developed reusable code components utilizing Laravel Traits to streamline common functions across models and controllers, such as soft deletes, user action logging, file handling, and response formatting.
- Designed and architected the official PPID (Information and Documentation Management Officer) Website.

Tools: VsCode, MySql Woekbench, Summernote Editor, Bootstrap, Postman

Full Stack Developer

- Designed and developed a Bill of Materials (BOM) data integration system to optimize production efficiency across Jumbo, Slitter, and Meltblown lines.
- Implemented business logic using Laravel and MSJ Framework (the company's proprietary in-house framework) to standardize application modules.
- Integrated SAP APIs to perform real-time automated validation on resource and material data, ensuring all selected data is registered in SAP and minimizing manual data entry risks.
- Authored system user manuals and other technical documentation to facilitate smooth deployment and end-user operations.

Tools: Laravel, MSJ Framework, MySQL, SAP API Integration, VS Code, Git/GitLab

Academic Projects

1. Customer Satisfaction Survey Information System | May 2024

- Role: Full-Stack Developer & UI/UX Designer (Native Web)
- Designed the User Interface (UI) and User Experience (UX) for a web-based customer satisfaction survey system using Figma.
- Structured and mapped out the database schema using MySQL.
- Developed the frontend and backend architectures from scratch using HTML, CSS, PHP, JavaScript, and MySQL.

2. Information Technology Department (JTI) Compensation Information System | December 2024

- Role: Full-Stack & Mobile Developer
- Designed UI/UX layouts for both web-based and mobile compensation applications using Figma.
- Engineered the core database structure and schema utilizing MySQL.
- Developed the web-based information system to manage student compensation data using Laravel, MySQL, and REST APIs.
- Built a Flutter-based mobile application that seamlessly integrates with the web system's APIs.

Core Strengths

- Technological Adaptability: Fast learner with the capability to quickly adapt to new technologies, including modern frameworks like Laravel and Flutter (Dart).
 - Collaborative Mindset: Experienced in working inside cross-functional teams to execute academic and professional projects efficiently.
